

## **Practical Task 1**

I am currently taking the Skills Bootcamp in Software Engineering (Fundamentals), provided by HyperionDev, in which I am learning Python - a very popular and powerful programming language. This bootcamp will teach me the skills and knowledge to be able to find and succeed in a role as a Python Software Engineer. By starting off learning the basics of Python, such as variable types, control structures and operators, I will be well equipped to succeed throughout the rest of the bootcamp. I aim to learn how to use functions, dictionaries and lists, as well as become proficient at error handling with Python programming. I will be able to use my skills to validate user inputs, provide program outputs and develop small portfolio projects that will boost my employability as a developer or software engineer. Additionally, the bootcamp will provide me with the necessary knowledge and skills to find a relevant career role and succeed in both obtaining an interview and being successfully offered a role thereafter.

Python has been used to build products behind large tech companies such as the social media platforms Instagram and Pinterest, as well as the dating app Bumble or the video streaming platform YouTube. Learning Python allows me to find and take on contract developer roles such as ones I have seen on job sites such as LinkedIn and Indeed, where consultant opportunities paying £400-500 per day or more are frequently advertised. Prior to taking this bootcamp and learning to use Python, I would not have been suitable for these opportunities, however I now have the skills needed to acquire these roles.

## **Practical Task 2**

Role 1 – Recruiter or Contact Details:

Job seekers –URL of identified Junior Tech Role, OR Self-employed – Website of Company you'd do Business with \*
